

the patented  
**ICERINK:DESIGN**

MESHICE® is a newly developed solution for the production of coloured ice surfaces.

It can be used for the entire design of the white surface, the linings and the sponsor advertising. Thus, for the first time, it is possible to completely dispense with painting the surface with one or more colours.

When defrosting the ice surface, time and cost advantages become visible, as the MESHICE® is professionally removed within a few hours and the time-consuming cleaning of the paint residues is no longer necessary.

The MESHICE® can be reused several times after it has been properly removed. When defrosting, only the pure water is returned in an environmentally friendly manner. Due to the particularly good cold conduction of the MESHICE®, cost savings can be achieved and energy efficiency noticeably increased.

We would be happy to advise you on this product and send you a quotation.
